About us

A brilliant invention – the towbar

As the inventor of the ball towbar, which has been patented worldwide, Westfalia-Automotive has held a natural claim to leadership in this field since 1932. This stroke of genius is typical of the strategy on which our success has been founded for over 80 years:

- constant innovation
- top quality

There's a good reason why we have been voted Best Brand for towbars by the readers of the magazine "auto motor und sport" seven times running. Such outstanding quality is no coincidence, but thanks to our highly skilled, dedicated employees, continuous research and systematic process orientation.

International expansion in Europe and overseas has been stepped up to develop the company's position as a traditional player on global markets. Besides the company first founded in the Westphalian town of Rheda-Wiedenbrück and its international sales offices, the corporate group also includes the subsidiaries SIARR (France), Monoflex (Sweden), Westfalia-Automotive Asia-Pacific (New Zealand) and Westfalia-Automotive Australia. Sales offices in all major European markets.

Power springs

At last something stopping you going
“weak at the knees” – Simple and effective

Heavily loaded vehicles perform significantly better under extreme conditions, including emergency manoeuvres at high speeds, when fitted with power springs.

This fact prompted Westfalia-Automotive to develop a range of intelligent power springs. They support the vehicle's original suspension system with additional spring force whenever needed.

Extensive on-road testing shows how vehicles become more manageable even when loaded with an additional 300 kilograms of weight. In extreme situations, this can make all the difference: having an accident or continuing happily on your way.

Power springs are an ideal complement to a towbar from Westfalia-Automotive, creating tremendous synergy when installed together at the garage.

Each spring has been developed for a specific vehicle model. Retrofitting is no problem and can be performed at any garage.

Improved safety with heavy loads

Better handling and comfort

Vehicles prevented from going “weak at the knees”

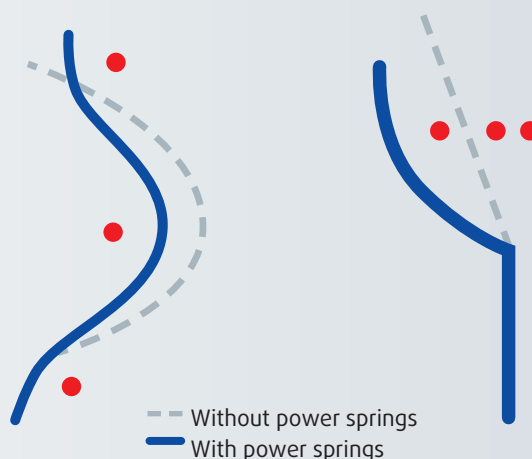

Low costs

TÜV-tested (by German Technical Inspection Authority)

WITHOUT POWER SPRINGS

Heavy loads can be too much for the standard suspension system of a vehicle – “bringing it to its knees” so to speak at the rear. The result: longer braking distances, risk of skidding and even possibly fishtailing in curves with crosswinds or during overtaking. This is caused by rough or uneven roads and potholes. All reasons to reinforce your vehicle's original suspension system when driving with heavy loads.

Slalom and obstacle avoidance test with 300 kg load in boot.

WITH POWER SPRINGS

Power springs from Westfalia-Automotive are designed to be simple and effective. Their extra boost of power is what's needed to keep your vehicle “off its knees”. They provide extra on-road stability and offer better grip for the front tyres to keep braking distances short. You can tow heavy loads more easily while minimising the risk of trailers or caravans fishtailing.

Roof racks

Specially designed for use with commercial vehicles.

Roof racks from Westfalia-Automotive impress with the stability and reliability they offer during the daily routine of the commercial vehicle sector – whether used by roofers, fitters or carpenters.

It goes without saying that they need a simple, vehicle-specific system for fixing loads to the roof. Once the roof rack has been fitted, they have an additional loading area with numerous options. Handling, shipment and storage are facilitated by the modular concept of the roof racks.

These racks are designed for heavy-duty, professional usage. They are individually adapted to each vehicle so as to cater for all wishes of the user. OE quality, real value for money and a wide range of products make roof racks from Westfalia-Automotive true all-rounders.

RX – the retractable towbar

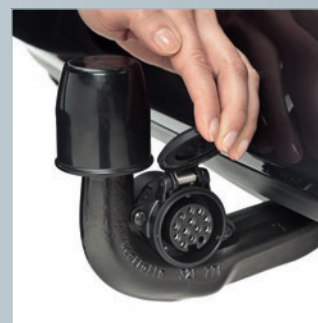

The name “RX System” stands for innovative ideas developed from original equipment for the aftermarket, offering the quality people expect from Westfalia-Automotive. Thanks to its compact design and special swivel sequence, the new retractable system is even suitable for vehicles with limited installation space. In designing the bumper cut-out, Westfalia-Automotive has followed the exact specifications of the vehicle manufacturer.

A convenient socket on the towball neck makes it easy to establish the electrical connections between the vehicle and the trailer / cycle carrier. When the towbar is not in use, it can be swivelled completely out of sight behind the vehicle bumper.

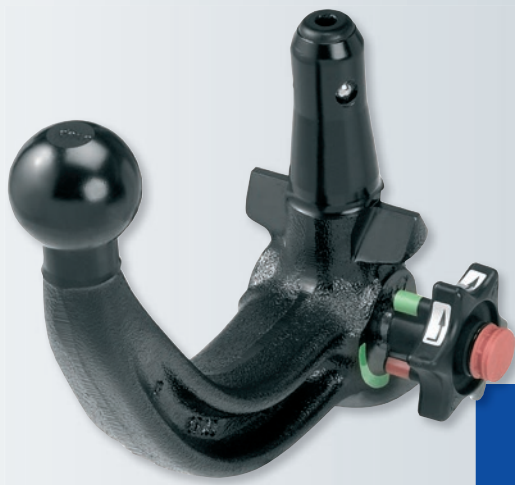

The towbar is unlocked using an easy-access handle positioned behind the bumper. The towball neck is then brought by hand into the final position, with a warning tone indicating the status of the locking mechanism.

The RX System is distributed as a package with the 13-pin, vehicle-specific wiring kit included. This optimises logistics while providing cost advantages.

KITS – Everything from a single source for a great price

KIT = Towbar + 13-pin electrical kit

Our KIT program has been further enhanced with the introduction of additional references. You will now find a KIT for nearly all of our towbar range which is supplied complete with a vehicle specific wiring kit. You can identify these KITs by the last figures of the part number: ... 900013.

Installation times

The specified installation times should only be used as an indication of the time required to carry out an installation. The length of time required to complete this will depend on a number of factors, the condition of the vehicle and/or the skills and experience of the individual carrying out the work. In certain circumstances, the specification of a vehicle may vary significantly, such as when an automatic CD changer has to be removed in order to install the electrical equipment, then the required assembly time may increase considerably. Where possible, always try and ascertain the full specification of the vehicle.

Vehicles with parking sensors:

When mounting permanently attached towbars, the towball may in some instances activate the vehicles rear parking sensors. This problem can be overcome by fitting a detachable towbar where the neck can be removed from the vehicle when not required for towing. Some vehicles do come with cut off switches for the rear parking sensors but you should check with the customer to confirm that this is an acceptable solution.

The following is valid before assembling a towbar and an electrical kit:

Always observe the instructions of the vehicle manufacturer in the operating manual of the vehicle.

Towbars and energy-saving vehicles

Some energy-saving vehicles have not been homologated for towing and therefore have no towing capacity. Always check the VIN plate or the vehicle handbook to verify the towing capacity of the vehicle.
