

Towbars –  
The original

## Kits – everything from a single source at a great price

Kits offer a combination of towbar and a vehicle-specific electrical kit. This makes installation easier, less time-consuming and more cost-effective. Westfalia-Automotive is the only manufacturer that offers more than 650 kits.

Towbar

Electrical kit

- » Retractable, detachable, or fixed systems
- » Reliable & perfectly fitted

Towing bracket

### The original. What else!

As the inventor of the towbar, Westfalia-Automotive works closely with the automotive industry to develop manufacturer-specific towing hitches.

With over 1700 different models, Westfalia-Automotive can supply solutions for almost all European vehicle models – all with 24-hour service in the aftermarket. In our production facilities, state-of-the-art design and production processes, including 3D CAD systems, numerous welding robots, laser cutting systems, and CNC processing centres ensure custom-tailored, high-quality and perfectly fitted towbars.

To meet our high quality standards for corrosion protection, every Westfalia-Automotive towbar is coated by means of the cathodic dip coating method (CDC). All models are EC approved and therefore do not have to be registered.

### The innovation

#### RETRACTABLE TOWBARS

Invisible and always ready: retractable towbars are the newest product development from Westfalia-Automotive, and provide convenience and easy operation. The retractable systems are always ready for use immediately and are completely hidden from view. If the towbar is needed, it can be swivelled out in seconds – electrically or manually. The rest of the time it stays invisible under the bumper.

### The classics

#### FIXED TOWBARS

The fixed model is the lowest-priced towbar and is particularly suitable for everyday use. It is available as welded or screwed-on towbar and offers functionality and easy mounting.

### The bestsellers

#### DETACHABLE TOWBARS

The detachable model enjoys considerable popularity as the aesthetic look of vehicles becomes increasingly elegant. When the towbar is removed, the towing system is not visible. They are available in two automatic versions: horizontally and vertically detachable.

### The heavy duty ones

#### TRAILER BRACKETS

Trailer brackets are available for every van or light truck. The trailer bracket is for very high tow loads and is equipped with a screw-down plate and the option of using an open-ended hitch.”
