

Simple and effective solution  
preventing vehicles dropping to  
their knees

Westfalia-Automotive has developed a range of intelligent power springs which support standard equipped shocks with added dampening power when it's needed most. Extensive on-road tests show how vehicles remain more manageable, even when pulling an additional 300kg of weight. In extreme or adverse situations this can make the difference between incurring an accident and driving on unscathed. Westfalia-Automotive power springs are developed specifically for each make and model of vehicle.

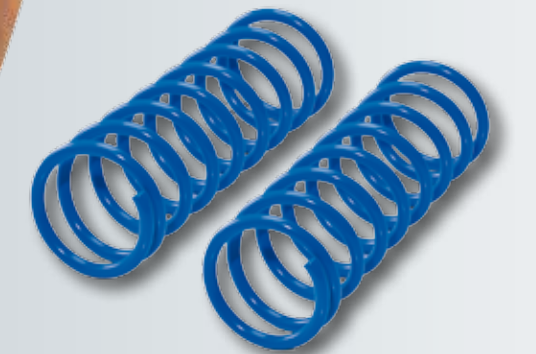

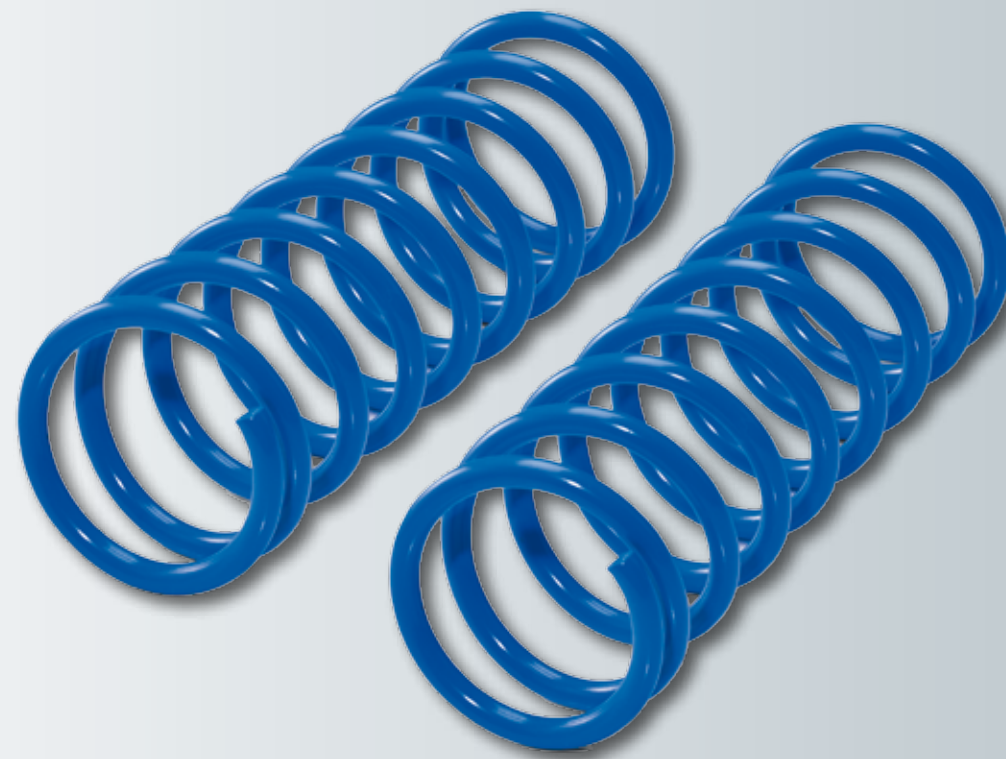

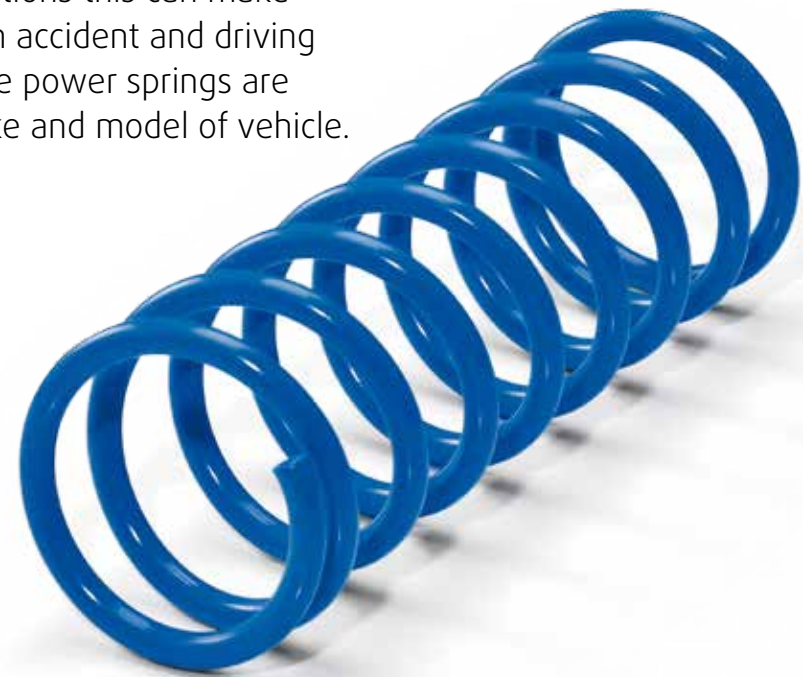

Increased safety for heavy loads

Improved handling and comfort

Prevents vehicle dropping to its knees

Low costs

TUV Certified  
(German Technical Inspection Authority)

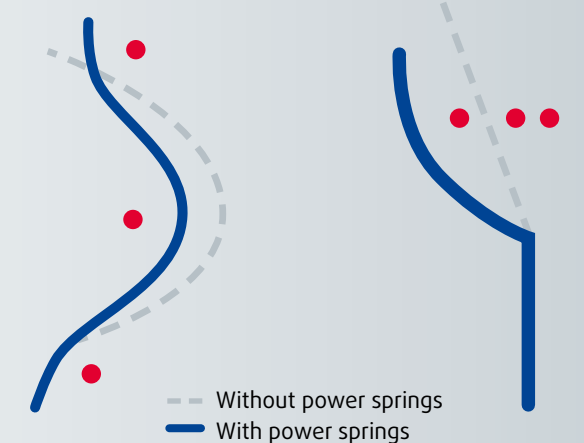

Keeps you  
in control

**WITHOUT POWER SPRINGS**

Heavy loads can overwhelm a vehicle's standard equipped shocks - dropping it to its knees in the rear. This results in longer braking distances, skidding and even potentially fishtailing through curves when crosswinds are present or when being overtaken. There are also increased shockwaves when driving over rough or uneven roads or through potholes. All good reasons to reinforce the standard equipped shocks on your vehicle before loading it.

**Slalom and evasive manoeuvre test with a 300kg load in the boot of the vehicle**

**WITH POWER SPRINGS**

Power springs from Westfalia-Automotive are designed to be simple and effective. They give the extra boost of power needed to keep vehicles off their knees. They provide extra on-road stability and deliver better grip for the front tyres to keep braking distances short. You can tow heavy loads better, while minimising the risk of fishtailing.
